

AQUATIC RECREATION SYSTEM & PLAYGROUND EQUIPMENT

Brandon, MS

Estimated Cost: \$800,000

In 2008 the City of Brandon decided to expand its Parks and Recreation system with the construction of a new aquatic recreation park and multiple playground parks. Guest Consultants, Inc. was contracted to assist in the design, management and contract administration of the project. The aquatic recreation park consisted of a new concession building

that served as concession stand and restrooms for park visitors as well as housed the water operation system. Additionally a concrete pad was constructed for the play area where a variety of water spraying playground equipment was located. As part of the same project additional playground parks were constructed. These parks were constructed in existing park facilities and include new playground equipment and fences.
