

## U.S. HWY 80/COLLEGE ST. IMPROVEMENTS

Brandon, MS

Estimated Cost: \$148,800

Federal/State Funds: \$148,800

This current project is being designed in order to replace a span wire signalized intersection with a mast arm signal. Guest Consultants responsibilities for this project include plan preparation, MDOT coordination, and Construction Management. Because of the federal funds that are being used to fund this project, the City is required to follow MDOT standards and the Local Public Agency Project Design Manual. We are assisting the City with these steps and procedures and have helped them throughout with submitting the Project Activation Request, Design Controls, Environmental Documentation and many other items.
