

## HIGHWAY 80 SERVICE DRIVE

Brandon, Mississippi

Estimated Cost: \$240,000

Around the years 1995-2000, the City of Brandon began experiencing rapid growth along the U.S. Hwy 80 Corridor. Due to this growth in development, the City also began experiencing an increase in traffic congestion. Guest Consultants was then tasked with determining a cost efficient way to reduce the congestion and increase the safety of the U.S. Hwy 80 corridor through the area adjacent to Rogers-Dabbs. Due to all the development that had occurred and was anticipated in this area, it was decided that the best solution was to limit and control the access points along U.S. Hwy 80. Guest Consultants designed and oversaw the construction of a service drive along the South side of U.S. Hwy 80 which connected from one established signalized intersection to another. This service road not only provided the adjacent development with access to U.S. Hwy 80, but at the same time it controlled the access points and strategically located them in order to decrease the congestion through this section of roadway.
